Weights and dimensions - conversion factors used

A shipment more than 2.4 m long is referred to as long shipment.

If the length of the shipment is between 2.41 m and 4.0 m; the conversion factor is applied: 1 running metre = 300 kg.

The maximum permissible length of shipment 4.0 m.

A shipment which needs separate loading space:

1 m of required length of vehicle floor (in full height and width of the loading platform) = 1,650 kg.

The freight rate for shipment is billed for standardised weight units (volume – 1 sqm = 333 kg) or actual weight, whichever is greater.

The rates are increased by Fuel Fee [opłata paliwowa] and Road Toll.
